

# Solar power station with generator

## Overview

---

Can a solar power station be used as a generator?

However, using one effectively is a little more complicated than many people realize. Technically, these units are electric power stations—giant battery packs, with the ports you need to plug in solar panels for charging. They can't actually harness solar power—and thus, act as a generator—unless you have both.

Which solar generator is right for You?

Whether you want something compact for camping or a larger unit for emergency home backup, these solar generators deliver the goods. The Jackery Solar Generator 2000 Plus is a fast-charging portable power station that can be bundled with SolarSaga 200W panels for recharging off-grid.

What is a portable solar generator?

The solar panels used in conjunction with a portable solar generator are mobile and easy to manipulate. Unlike the panels found on residential or commercial properties, they are smaller in size and have a lower wattage capacity, which means less solar input than their larger counterparts.

How do you choose a portable power station?

Perhaps the most obvious consideration is the capacity of the portable power station and the solar panels. The power station's capacity measures how much energy you can store, while the solar panels' capacity measures how much solar energy you can funnel into the battery at one time.
