Solar system electricity

Overview

What is a solar power system?

A solar power system is made up of a variety of components that turn sunlight into useful electricity. Photovoltaic (PV) panels are at the heart of any system, absorbing sunlight and converting it into direct current (DC) power.

How do solar power systems work?

Solar power systems can be connected to the grid or operated independently. Grid-tied systems allow users to draw electricity from the grid as needed, whilst off-grid systems offer complete energy independence.

What is solar energy?

Solar energy, radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is vastly in excess of the world's current and anticipated energy requirements.

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic (PV) uses electronic devices, also called solar cells, to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.
