# Sunroom with solar panels

## Overview

---

What makes a great sunroom?

Blocking off the wind by means of glass (windows, doors and fixed panels) forms a great sunroom. Roofing options, as mentioned, can vary and one is never restricted. Our unique construction method ensures strong, durable structures being able to withstand windloads up to 105km per hour.

What is a commercial sunroom?

Commercial sunrooms by Solar Innovations ® provide the strength, durability, and customization options second to none in the industry. Solar's glazed structures can be directly on the ground or atop high rise buildings.

Can a sunroom & screen room be built into an existing structure?

All of our sunroom and screen rooms can be built into your existing structure. Whether you are looking to simply add a screen system on your porch to keep out the bugs or full glass walls to extend the use of your covered patio space, we can design an enclosure specifically for your home. If it's structurally possible, we can do it.

Who builds a sunroom?

Proport, a specialist in the construction of sunrooms since 1986. We use our tried and tested concept, making use of lightweight aluzinc for the beams. Roof sheeting can vary, depending on clients needs and practicality. A suspended ceiling with insulation is also an alternative.
