

# The difference between inverter grid connection and hybrid grid connection

## Overview

---

What is the difference between hybrid and off-grid inverters?

Hybrid inverters are connected to the grid and can operate in various modes, including exporting energy to the grid and providing backup power. Off-grid inverters, on the other hand, are designed for standalone systems that are not connected to the grid and rely entirely on solar and battery power.

What is the difference between grid-tie and hybrid solar inverters?

Let's compare hybrid inverter vs grid-tie inverter options head-to-head:

**Versatility:** Grid-tie inverters stick to grid feeding, while hybrid inverters juggle solar PV inverter duties with battery backup. **Energy Independence:** Hybrids shine in off-grid vs grid-tied solar scenarios; grid-tie units don't.

Are hybrid inverters better than grid-connected inverter?

**Investment cost:** The initial investment of the grid-connected inverter is low, but it has no energy storage function; although the initial investment of the hybrid inverter is higher, in the long run, the comprehensive benefits of combining the energy storage system may be more significant.

Are hybrid inverters suitable for off-grid solar power systems?

Hybrid inverters suitable for off-grid solar power systems include the LXP Hybrid 3-6k and the LXP Hybrid 4-6k HB. Only a few hybrid inverters are designed for off-grid use and can start and run backup power when needed. There are many advantages of solar hybrid inverters which we need to consider when choosing a solution.
