# The relationship between coal mines and new energy storage

## Overview

---

Can underground space energy storage technology be used in abandoned coal mines?

The underground space resources of abandoned coal mines in China are quite abundant, and the research and development of underground space energy storage technology in coal mines have many benefits.

Do coal mines need energy storage technologies?

Various energy storage technologies and risks in coal mine are analyzed. A significant percentage of renewable energy is connected to the grid but of the time-space imbalance of renewable energy, that raises the need for energy storage technologies.

Are coal mines a legacy of the Industrial Revolution?

Coal mines, whether operating or abandoned, represent a legacy of the Industrial Revolution but also hold transformative potential. With awareness of the need to reduce greenhouse gas (GHG) emissions and the pressing need to meet growing global energy demand, it is vital to explore new directions for this fossil energy source.

How to promote coal mine energy storage?

(3) Provide financial incentives, such as subsidies, tax breaks and investment incentives, to attract investors to participate in coal mine energy storage projects. (4) Support technological innovation and R & D to promote the application and commercialization of new technologies in the field of coal mine energy storage.
