# Tunisia Energy Storage Planning Project

## Overview

---

Why should Tunisia invest in tereg?

“ By fostering renewable energy development, TEREG will strengthen Tunisia’s position in clean energy, creating economic opportunities and ensuring long-term energy security,” said Alexandre Arrobbio, World Bank Country Manager for Tunisia. “ This project reflects our strong partnership with Tunisia and supports its sustainable development goals.

How can Tunisia increase its energy access rate?

Tunisia must build up and expand its power generation system to increase the energy access rate to 100%. Building new power plants – no matter the technology – will require new infrastructure (including power grids), spatial planning, a stable policy framework, and access to finance.

Can Tunisia build a reliable electricity supply?

We found that Tunisia can cost-effectively build a reliable electricity supply based on local power generation, with high proportions of solar and wind power. With an onshore wind potential greater than 30 times the projected 2050 demand and a solar potential greater than 100 times that demand, Tunisia has exceptional renewable energy potential.

Will Tunisia establish a stable framework for deploying renewable power?

Policy stability: This research assumes that Tunisia will establish a secure and stable framework for deploying renewable power generation. Financing a gas power plant or a wind farm is quite similar.
