

# **Two-way charging of mobile energy storage containers for ships in South Korea**

## Overview

---

What is a marine charging system?

Vessel charging solutions are designed for ships that have an energy storage system – for example a marine battery. A marine charging system works in much the same way as a charging system for cars and other electric road vehicles. Vessel charging systems are not yet standardized like alternative marine power (AMP) systems.

Could offshore charging stations improve green shipping?

Offshore charging stations could be a promising solution to enhance green shipping. This research considers their optimal placement and sizing, extending the economic range of renewable ships to 9,000 km without compromising shipping efficiency.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

.

Are vessel charging systems standardized?

Vessel charging systems are not yet standardized like alternative marine power (AMP) systems. They often require fast charging or DC charging, though normal charging or AC vessel charging is also possible. The IEC 80005 standardized AMP system can be used for charging if the port stay is long enough, such as for RoPax or RoRo vessels.
