UK Uninterruptible Power Supply Equipment

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supply or UPS provides instantaneous backup power when there is a loss of power supply from the mains supply or if the voltage level drops. This ensures computers or equipment can be shut down safely, or switched over to power supplied by a generator. The design and size of a UPS determines how long the power supply will last.

How important are uninterruptible power supplies?

At Vital Power we fully understand and appreciate how important uninterruptible power supplies (UPS) are in supporting critical electrical infrastructure. Emergency power is what keeps businesses online and up and running when there's a power failure from an outage, weather event or other issue.

What is a ups & how does it work?

What is a UPS?

Uninterruptible power supply or UPS provides instantaneous backup power when there is a loss of power supply from the mains supply or if the voltage level drops. This ensures computers or equipment can be shut down safely, or switched over to power supplied by a generator.

Who do you partner with for uninterruptible power supplies?

We only partner with suppliers who meet our stringent supply chain standards for quality (ISO 9001), health and safety (ISO 18001), and environmental management (ISO 14001).
