Uninterruptible power supply output voltage is not low

Overview

What is an uninterruptible power supply (UPS) system?

Power distortions such as power interruptions, voltage sags and swells, voltage spikes, and voltage harmonics can cause severe impacts on sensitive loads in the electric systems. Uninterruptible power supply (UPS) systems are used to provide uninterrupted, reliable, and high-quality power for these sensitive loads.

Why does my ups turn off all outputs without mains power?

If the mains detection circuit is not working properly and the UPS does not have the start-up function without mains power, the UPS will also turn off all outputs and displays. 4. If the city detection circuit works normally, then check whether the battery voltage detection circuit is normal.

What is a dynamic uninterruptible power supply?

For large power supplies, a dynamic uninterruptible power supply (DUPS) can be used. The synchronous motor/alternator is connected to the mains power supply through a choke. Flywheel stored the energy. In the event of a line failure, the stored current control keeps the load driven until the power of the flywheel is exhausted.

What is a voltage independent ups?

- VI (Voltage Independent): this is the UPS in which the variations in the power supply voltage are stabilised by electronic/passive regulation devices within the limits of routine operation .
