

FTMRS SOLAR

# Uzbekistan solar inverter installation company

## Overview

---

Where are solar inverters located?

Microinverters are located on the roof near the solar panels, due to which these inverters are more efficient than string inverters when it comes to converting energy. Solar systems with microinverters can still generate electricity, even if one or two panels do not perform properly.

What is a microinverter solar system?

Typically, microinverters are “distributed” inverters. Solar PV systems with microinverters have a small inverter installed for each individual solar panel. Instead of sending energy from every panel to a single inverter, microinverters convert the DC energy to AC energy on the roof itself.

What is Uzbekistan's First Energy Storage Project?

Installed with Sungrow's cutting-edge liquid-cooled ESS PowerTitan 2.0, this facility marks Uzbekistan's first energy storage project and stands as the largest of its kind in Central Asia. The project will play a pivotal role in driving the region's energy transition forward and setting a sustainable precedent.

Who is solar nature?

In terms of quality, efficiency and durability, Solar Nature is one of the leading installers of turnkey solar photovoltaic plants in Uzbekistan. The company was founded in 2014 as a distributor of solar photovoltaic modules and inverters.
