# What time does the Cadmium Telluride solar panel generate electricity

## Overview

---

What is a cadmium telluride solar cell?

Cadmium telluride solar cell, a photovoltaic device that produces electricity from light by using a thin film of cadmium telluride (CdTe). CdTe solar cells differ from crystalline silicon photovoltaic technologies in that they use a smaller amount of semiconductor—a thin film—to convert absorbed light energy into electrons.

Are cadmium telluride solar panels cheaper?

Cadmium telluride (CdTe) solar panels have a significant pro when it comes to cost. They are generally cheaper to produce than other solar panels, such as crystalline silicon panels. This is mainly because CdTe uses less material and has a shorter manufacturing process.

How efficient is cadmium telluride?

Continued improvements in cadmium telluride technology are pushing closer to CdTe's theoretical efficiency of above 30%. Regarding costs, CdTe solar cells are generally cheaper to produce than silicon-based cells, with prices around \$0.46 per watt.

How does cadmium telluride (CdTe) work?

Cadmium telluride (CdTe) works by forming an electric field that converts light absorbed in the CdTe layer into current and voltage. Cadmium telluride (CdTe) functions as the primary photoconversion layer in various applications, notably in photovoltaic (PV) or solar cells.
