

# **Where are the latest energy stations in Estonia**

## Overview

---

What percentage of Estonia's electricity comes from low-carbon energy sources?

Over the past twelve months, from November 2024 to October 2025, Estonia has sourced more than 40% of its electricity from low-carbon energy sources. Almost a third of Estonia's electricity comes from net imports, which mostly include various forms of low-carbon electricity.

Where does Estonia's electricity come from?

Almost a third of Estonia's electricity comes from net imports, which mostly include various forms of low-carbon electricity. Fossil fuel sources contribute to just under a quarter of the total electricity generation, with coal being the largest fossil source at about 19%.

How is energy used in Estonia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Is biomass a source of electricity in Estonia?

Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income settings. Estonia: How much of the country's electricity comes from nuclear power?
