Which outdoor power generator is better

Overview

Do you need a portable generator?

The most common use and need for portable generators is for backup power. With the number of natural disasters trending up every year, according to the National Centers for Environmental Information, preparing for an outage is a more prudent investment than ever.

What is a portable generator?

These generators, sometimes called backup generators, are used to provide temporary power when and where it is needed. Portable is a relative term; some are more portable than others. While the smallest models can be picked up and carried, most have wheels and a handle to make transport easier.

Can you run a generator in a garage with the door open?

Do not run a generator in a garage with the door open, or in front of the garage with the door open—carbon monoxide can still become trapped in the garage and slowly make its way into the home.

What is a standby generator?

Standby generators are permanently installed and connected to a home. These may power selected, critical circuits during a power outage, or may provide power for the whole home. Standby generators have systems that monitor power supplied by a utility and start automatically in the event of an outage.
