Which solar system to choose

Overview

What type of solar panel should I choose?

The type of solar panel you should choose depends on the type of system you want to install. For a traditional rooftop solar panel system, you'll usually want monocrystalline panels due to their high efficiency. If you have a big roof with a lot of space, you might choose polycrystalline panels to save money upfront.

What are the primary types of solar panels?

The three main types of solar panels are monocrystalline, polycrystalline, and thin film. Monocrystalline solar panels are the most efficient, while polycrystalline can be the most cost-effective. Thin-film solar panels can be the best for DIY projects or RVs.

Which solar panels are best for a small roof?

If you have limited roof space, choose a high-efficiency solar panel to maximize your system's output. Monocrystalline panels are typically the best choice, with efficiencies over 22% and power capacities over 300W.

How to choose a solar power system?

Shading: there should be none or minimal shading, for example if your house is surrounded by tall trees it is most likely not suitable for solar power system. Roof type: a flat roof is quite suitable for a solar installation and a pitched roof facing South also works. An East or West orientation is also feasible with a properly sized system.
